

What Is DIMS? *Save Resources, Time, Money — and Even Lives!*

Efficient, Effective Incident Command Management

Our **Disaster Incident Management System (DIMS)** is a **fully automated, web-based emergency management system** that allows any organization to conduct training exercises and manage real-time emergencies using the Incident Command System (ICS), which can be specially designed to meet the needs of your organization.

A Customized Structure to Meet Your Organization's Needs

DIMS allows your organization to design Incident Command Team Charts and Job Action Sheets and to create electronic forms for any identified hazard vulnerability — providing the flexibility to meet the specific needs of your organizational structure regardless of size or available resources.

With **DIMS** engaged, the Incident Commander activates the appropriate template for the event or exercise and deploys the Incident Command Team Members (IC Team) to **manage the disaster — from a desktop computer or portable device.**

The IC Team is immediately notified of their assigned role(s), and provided with information to log into the Position Control Interface.

Once active, the IC Team has access to all the management controls needed to **effectively and efficiently perform their mission**, including:

- Activating and deactivating personnel
- Interactive Job Action Sheets to stay on task and track assignments
- Automated forms, quickly completed and saved in archive
- Real-time IC Team Chart to monitor, manage and communicate to Team Members

- Ability to send and receive messages, as well as to conduct virtual meetings
- Log of all activities performed throughout the event by every position
- Access to all emergency management plans and relevant documents
- Ability to interface with other organizations that use **DIMS** in a unified command structure

Scenario-Based Training Exercises

Create any external and internal disaster scenario for specific vulnerabilities or risks associated with your organization and test your ability to manage disasters using the Incident Command System.

DIMS allows you to create immersing multimedia scenarios and challenging interjections that will engage your IC Team in an invaluable learning experience.

Manage the disaster from a desktop computer or portable device!

DIMS provides the Exercise Controller with total control of the training exercise.

The Exercise Controller has the ability to:

- Shadow IC Team Members to monitor their activity
- Review real-time activity logs
- Communicate to keep IC Team on track
- Manually send interjections to IC positions to maintain the flow of the exercise

Improved Performance and Reporting

When activated, **DIMS** captures every action that takes place during the incident, including activations, deactivations, meetings, messages, forms, and time and labor costs. This feature prevents the labor-intensive process of compiling information necessary for process improvement and reimbursement.

The system produces:

- After-action reports
- Reimbursement reports
- Ad-hoc reporting feature for custom reports
- Activity logs
- Participant feedback forms

...these numbers will continue to rise.

It can make the difference in saving lives and protecting your organization's most valuable assets.

Incident Management System (DIMS)
response capabilities and reduce cost exercises by over 30% for your organization.

REGULATORY COMPLIANCE:

DIMS was designed to comply with federal standards for the National Incident Management System (NIMS).

GRANT FUNDING:

Subscriptions to **DIMS** may be eligible for grant funding, and DisastersNet Inc. will assist your organization in obtaining this funding, if available.

RESPONSE AND EXERCISE COST:

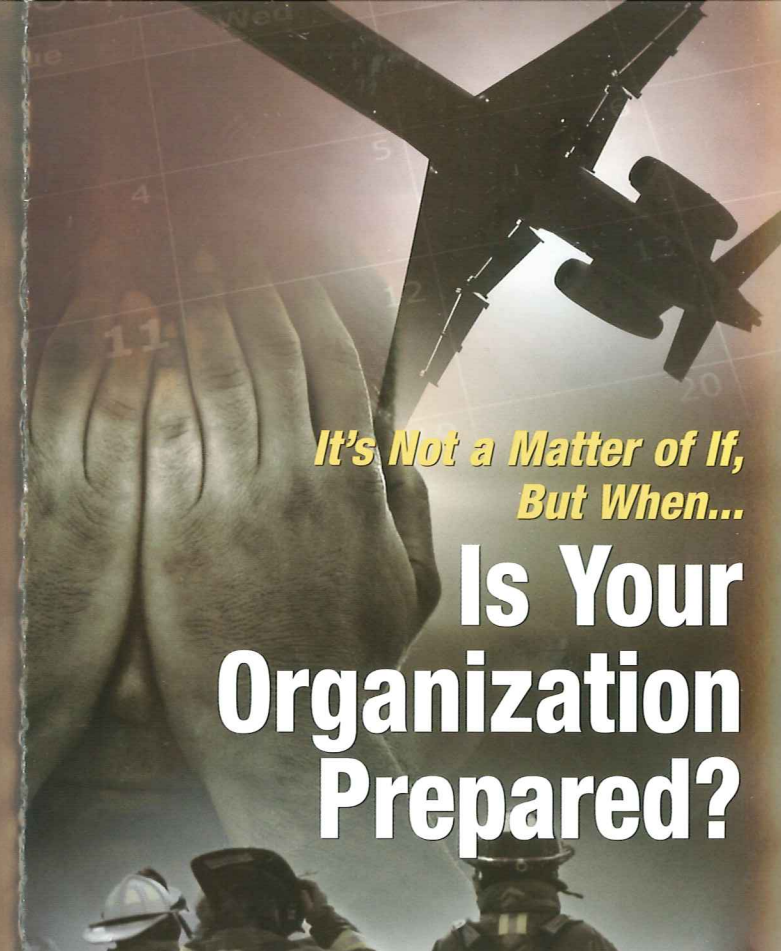

DIMS provides you with the ability to capture labor and supply costs associated with response to a disaster or exercise. This is a critical, but daunting, task for your organization. **DIMS** does all the hard work for you by compiling this information and generating reports to track cost or help expedite eligible reimbursement.

Find out how **DIMS** can help your organization save resources, time, money — and even lives.

DISASTER INCIDENT MANAGEMENT SYSTEM

Managing Crisis Through Preparedness

Over the past 10 years, disasters have **INCREASED BY 30%** in the United States, and trends indicate...

Every organization should not only have an emergency operations plan in place, but they also should have well-trained staff that know their responsibilities when disaster strikes.

Amazingly, most organizations still use a manual, archaic approach for implementing their emergency operations plan as well as training their staff — leading to a process that is cumbersome, confusing and inefficient. These common issues not only cost unnecessary time and money, but they also could potentially cost lives.

DisastersNet has the solution: Disaster **DIMS** can improve of required
